Twinkling fiber can be installed in pools, spas, saunas and other outdoor areas

**Twinkling
fiber can
be
installed in
pools,
spas,
saunas
and other
outdoor
areas**

A photograph of a star ceiling. The ceiling is dark brown or black, and it is covered with numerous small, bright, white lights that resemble stars. The lights are scattered across the ceiling, with some appearing larger and brighter than others. The ceiling is curved, and the lights are arranged in a way that creates a sense of depth and perspective. The overall effect is a warm, ambient glow.

A star ceiling does not require your ceiling to be dark.

You may want a higher star density to make up for the lowered contrast.

Random is the key. When fiber is installed too symmetrical or too sparsely, it resembles a **grid** of stars instead of a night sky.

Subtle color variations can really add impact. Use dry-erase markers and add some squiggles to the fiber where it connects to the illuminator. If you don't like it, just wipe it off.

Constellations, spiral galaxies, shooting stars, planets and other creative elements add interest and are great additions for children's rooms

Backgrounds can be painted or printed. Even custom fabrics can be used on your pre-manufactured panels

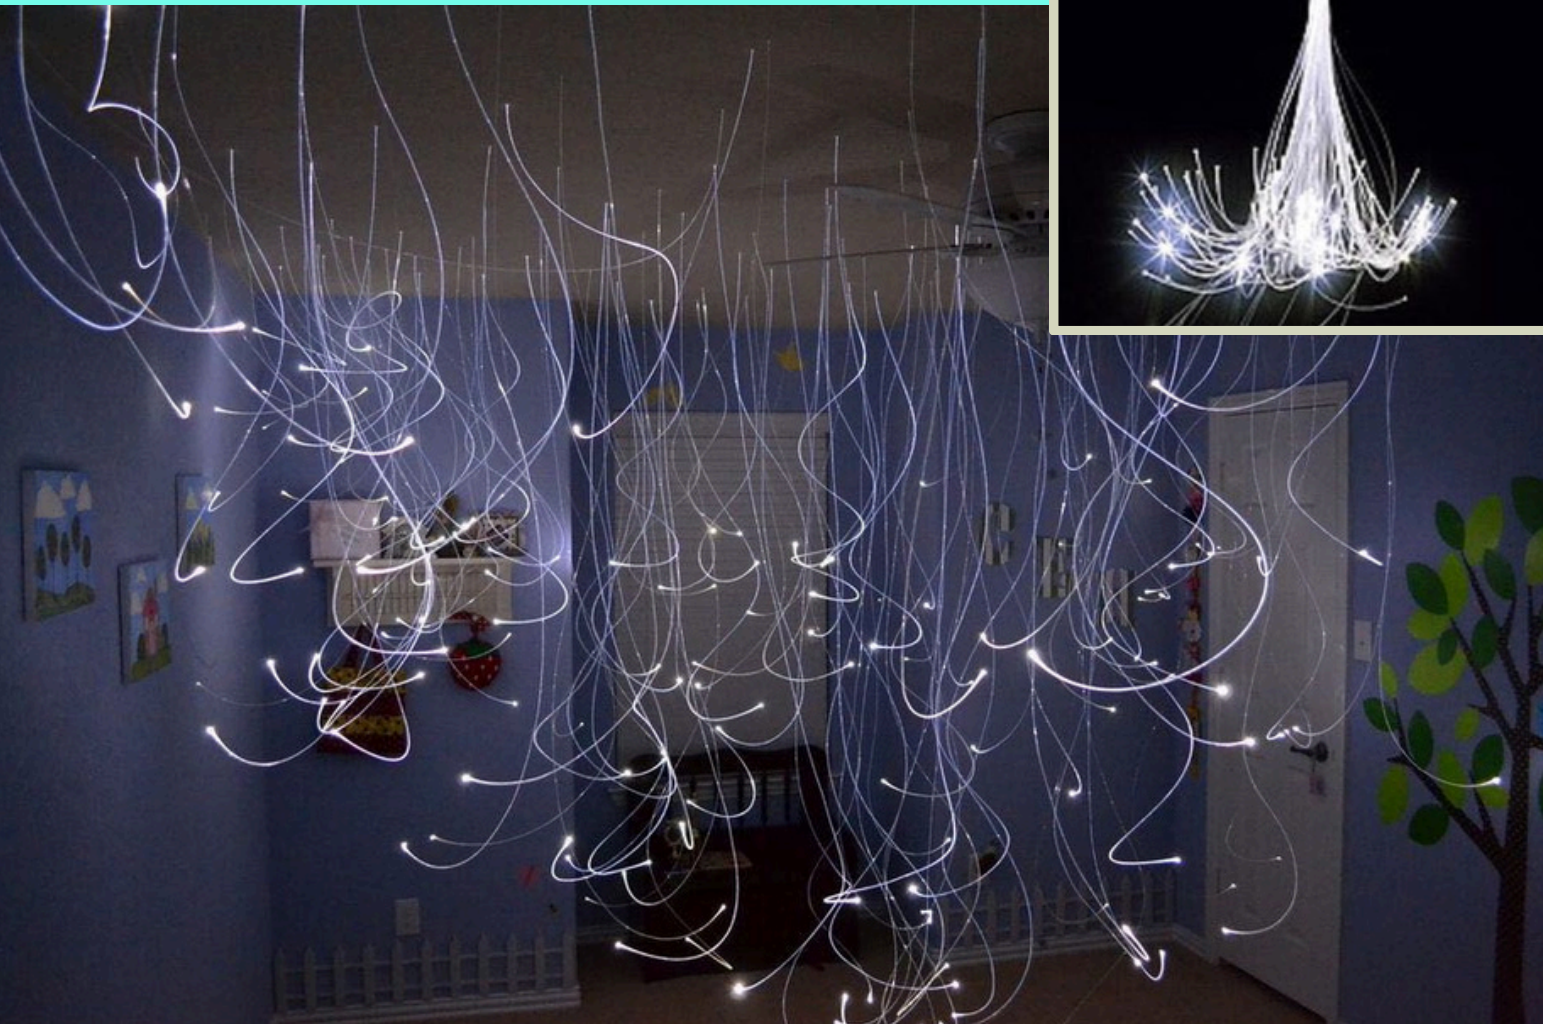

Illuminated fiber hanging from the ceiling can be just as impressive as a full star ceiling.

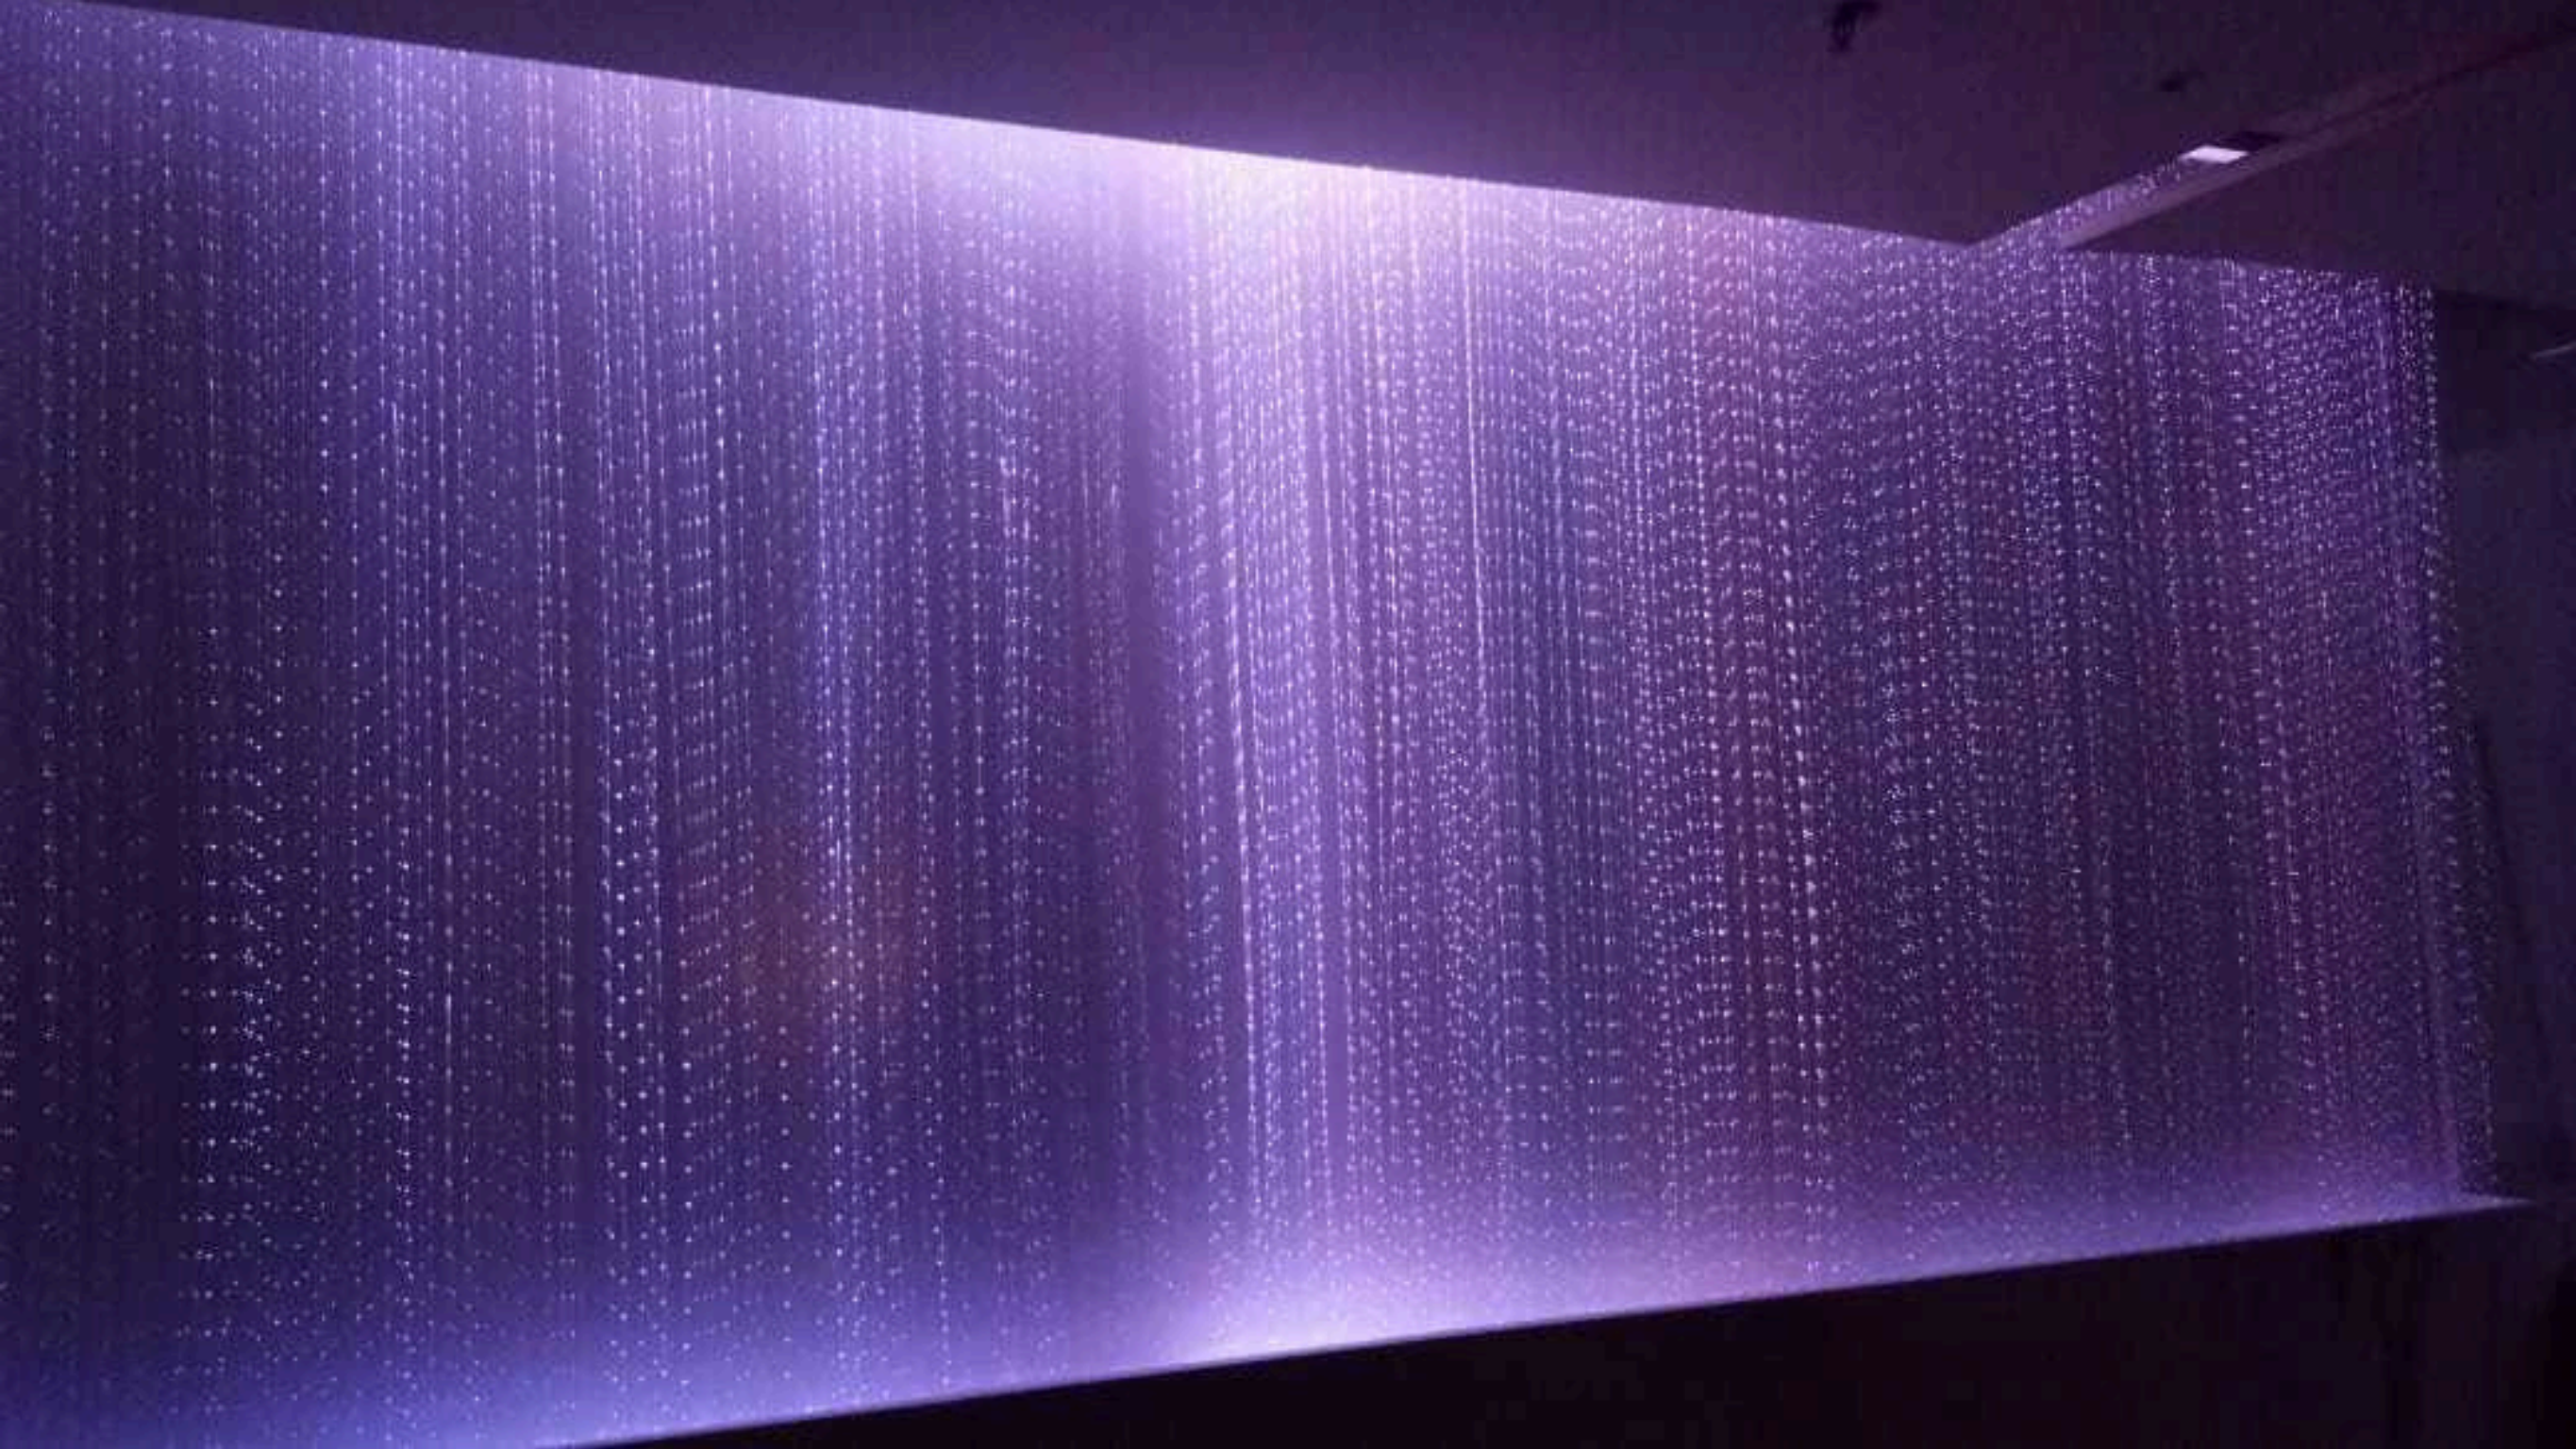

Leftover ceiling tiles , drywall or wood remnants are easy to turn into creative chandeliers

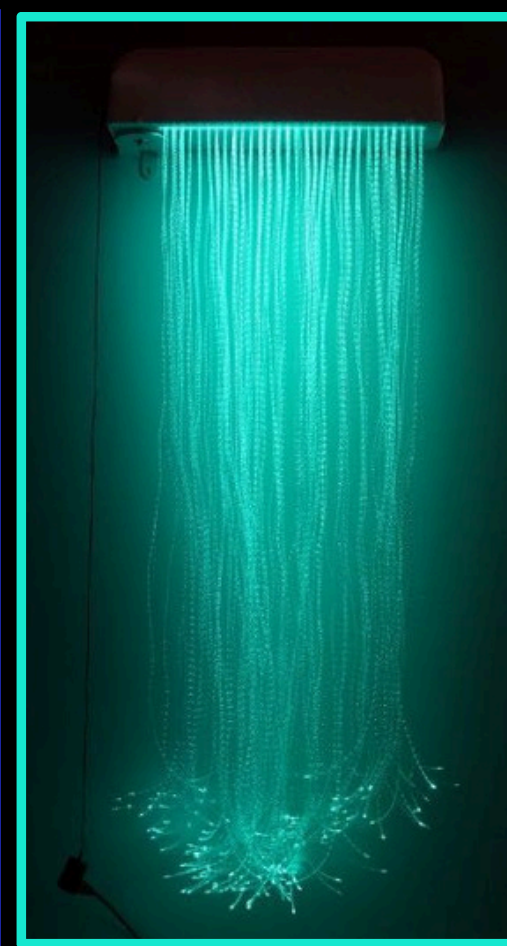

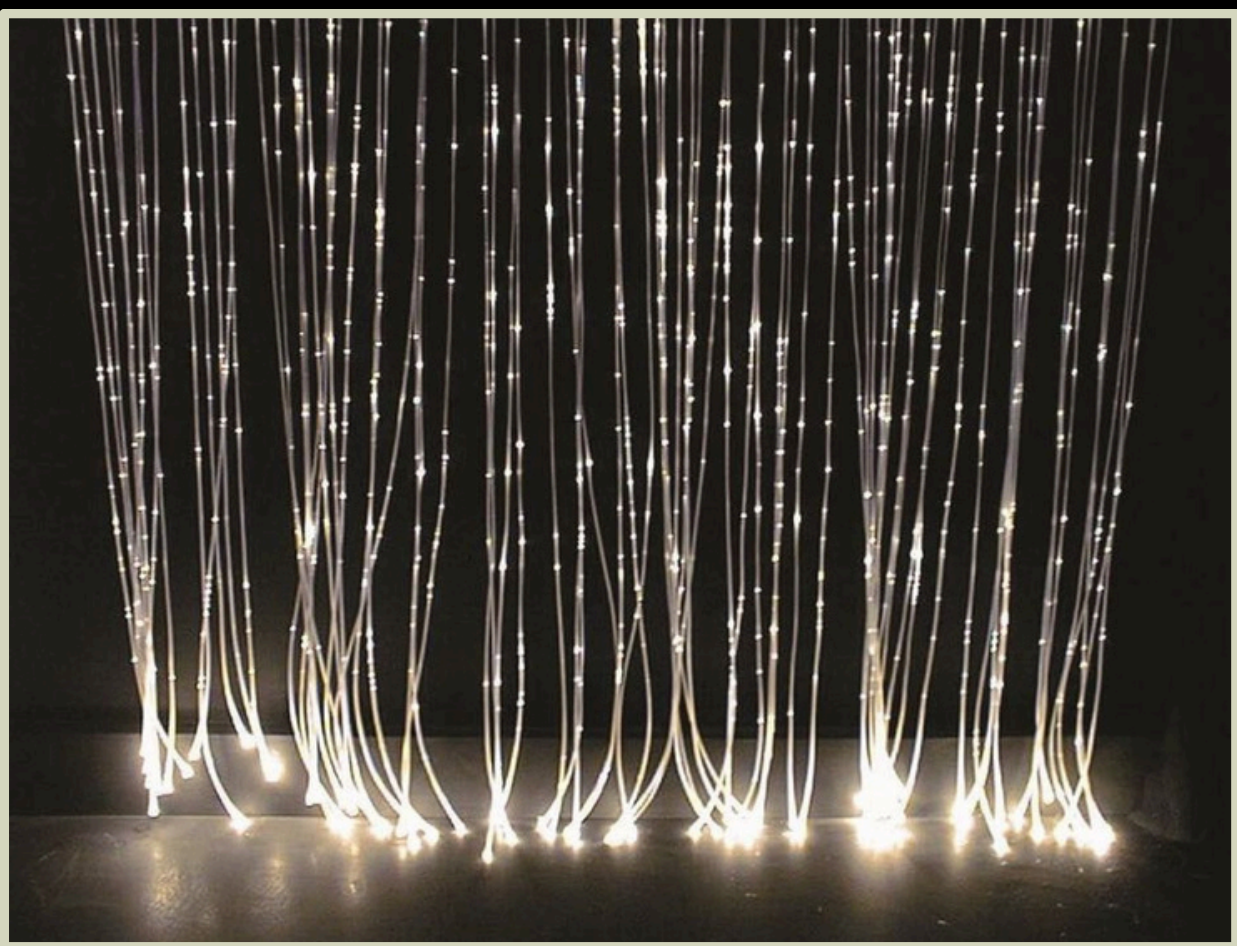

Multi-stranded sparkle fiber catches light at various etch points along the length

End-glow fiber has a natural curl to it at longer lengths that can create a fun look to a plain area

A hanging sparkle, fiber optic
curtain creates a waterfall effect

*Custom panel sizes
are no problem. Just
provide us
with dimensional
drawings*

*Panels are available
in standard drop-in
sizes for easy
installation*

*Crystal end pieces and fittings
can create formal or futuristic
sprays of light*

The image shows a ceiling with three recessed rectangular sections. Each section is bordered by a bright white LED strip that glows with a blue light. The interior of each section is filled with numerous small, white, starburst-shaped lights. The overall effect is a modern, ambient lighting design. The text is overlaid on the right side of the image.

LED backlighting
your panels creates
an awesome glow
while also
providing ambient
light

Panels can be made for small areas such as dressing rooms, bathrooms, showers and saunas.

**You don't have
to go wall-to-
wall with your
star ceiling.**

**Organic and
non-standard
shapes**

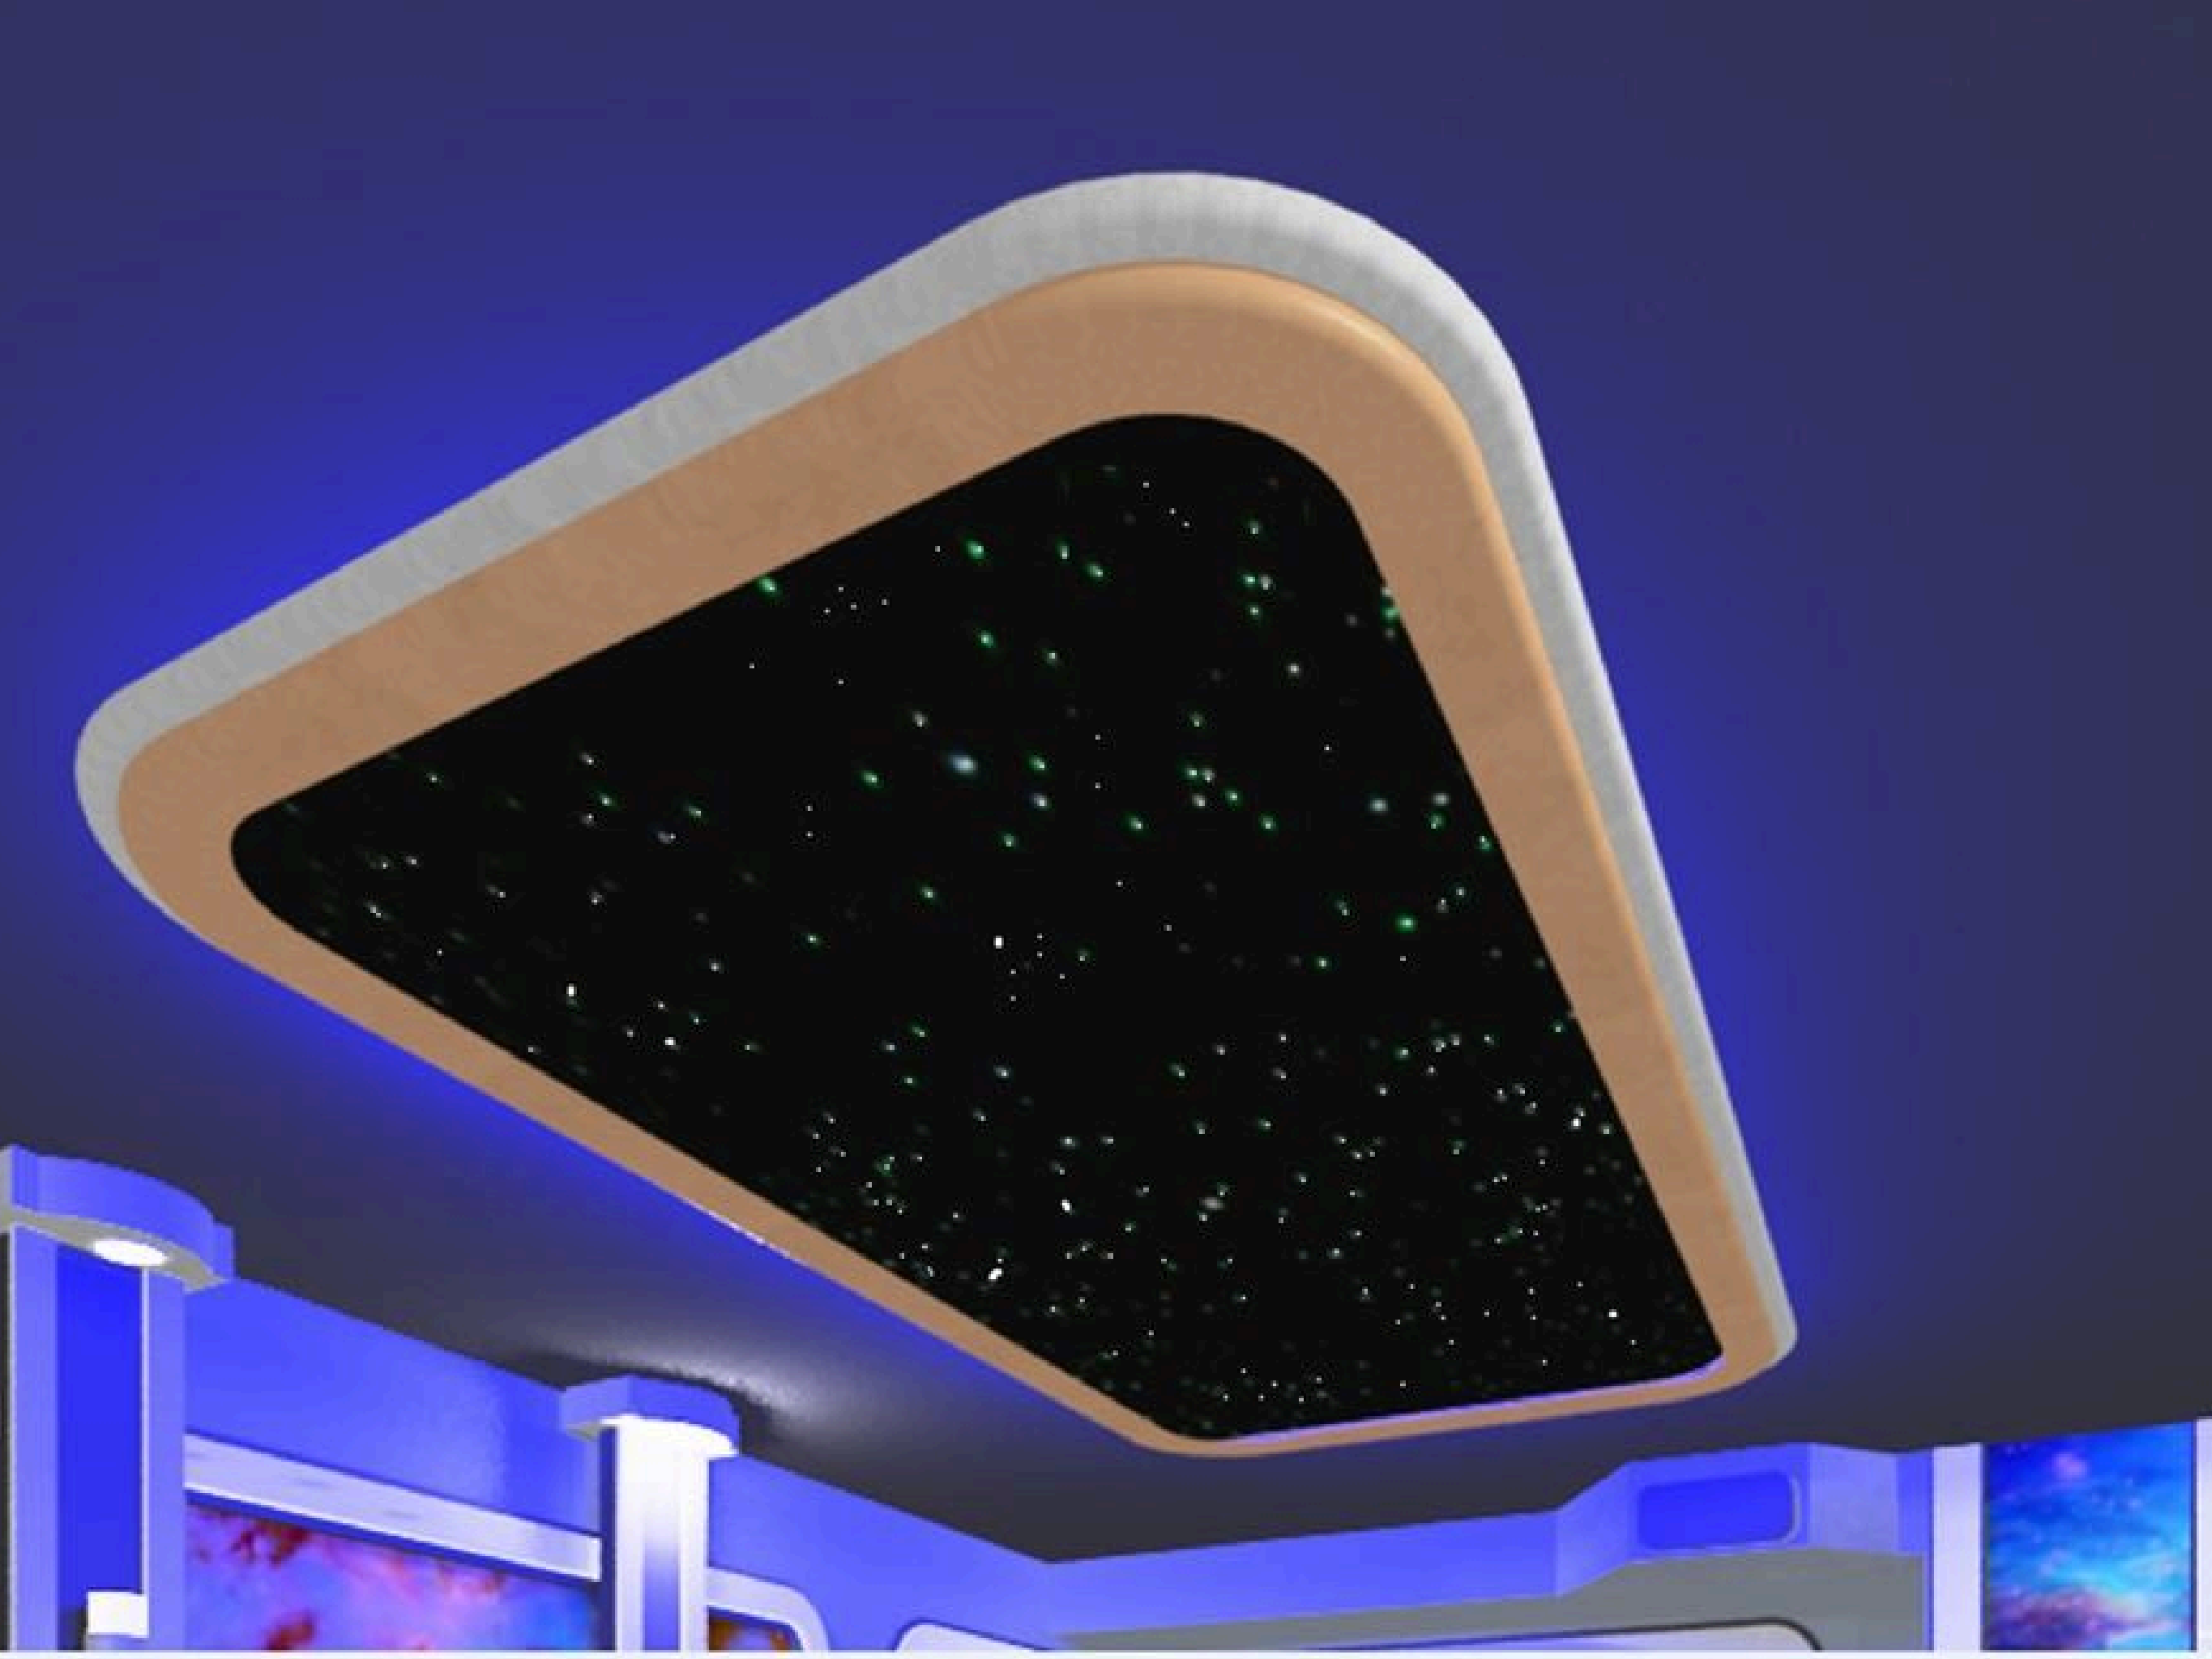

**can
dramatically
reduce cost
while adding
interest.**

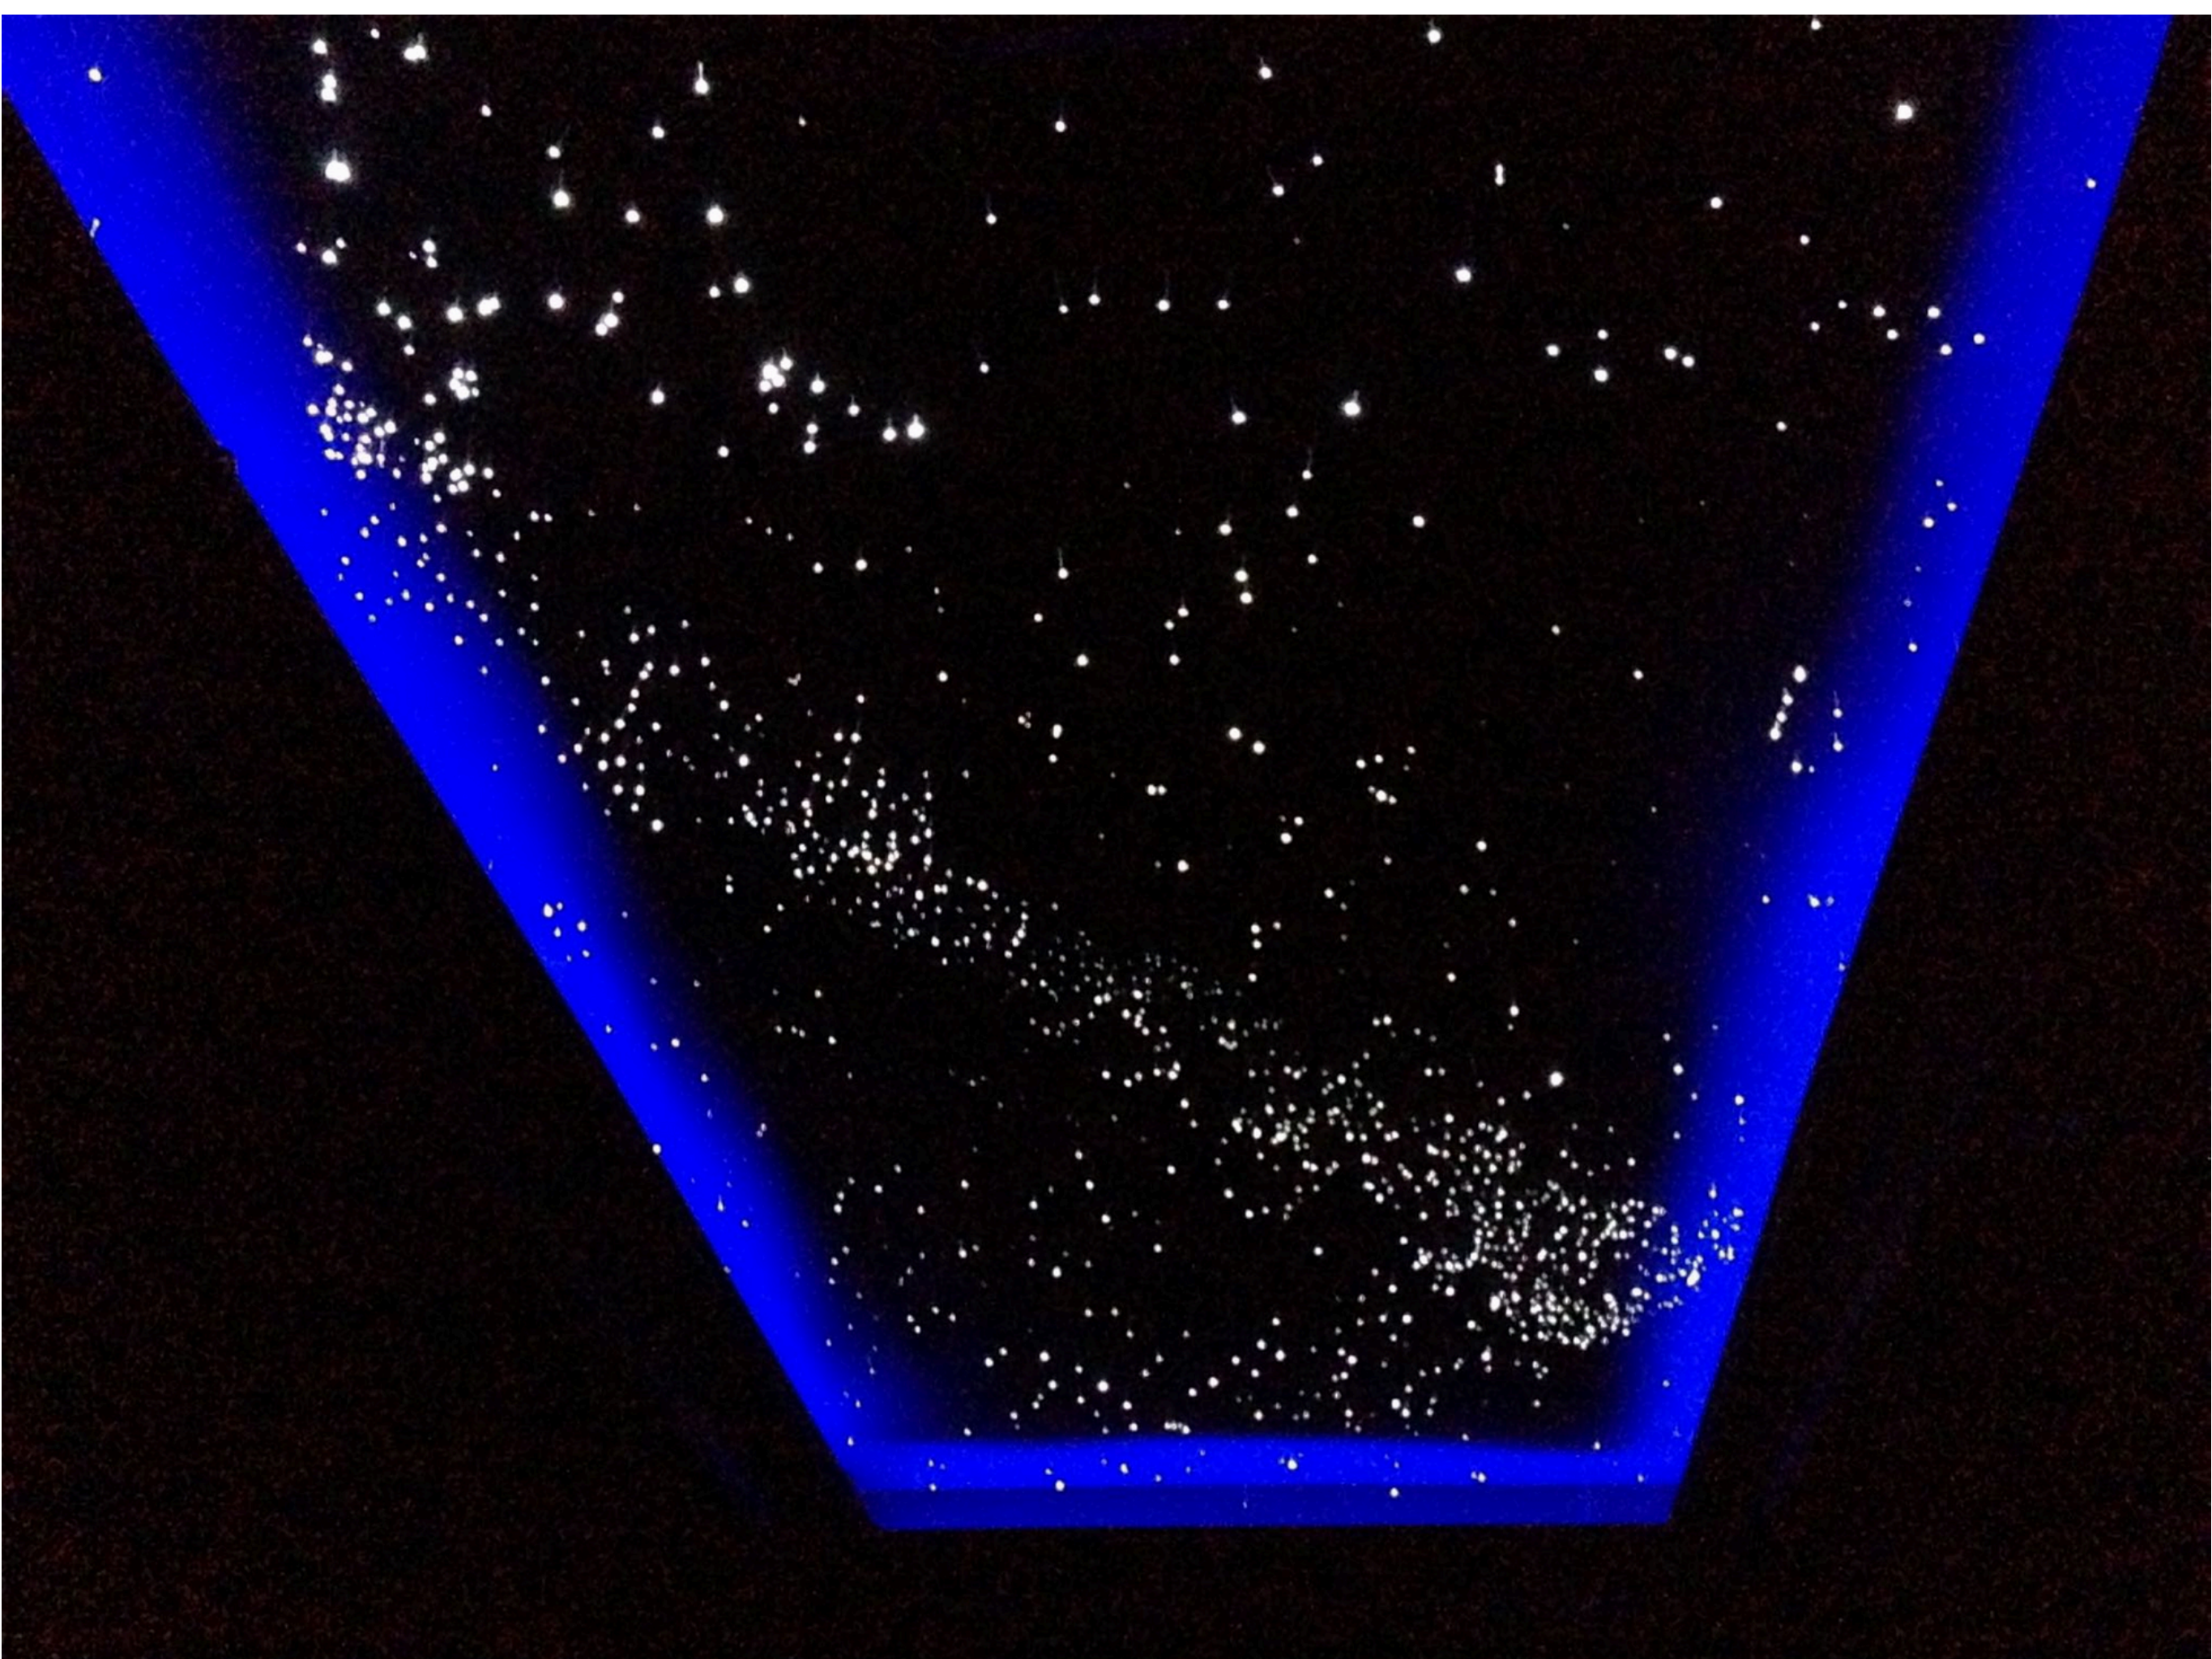

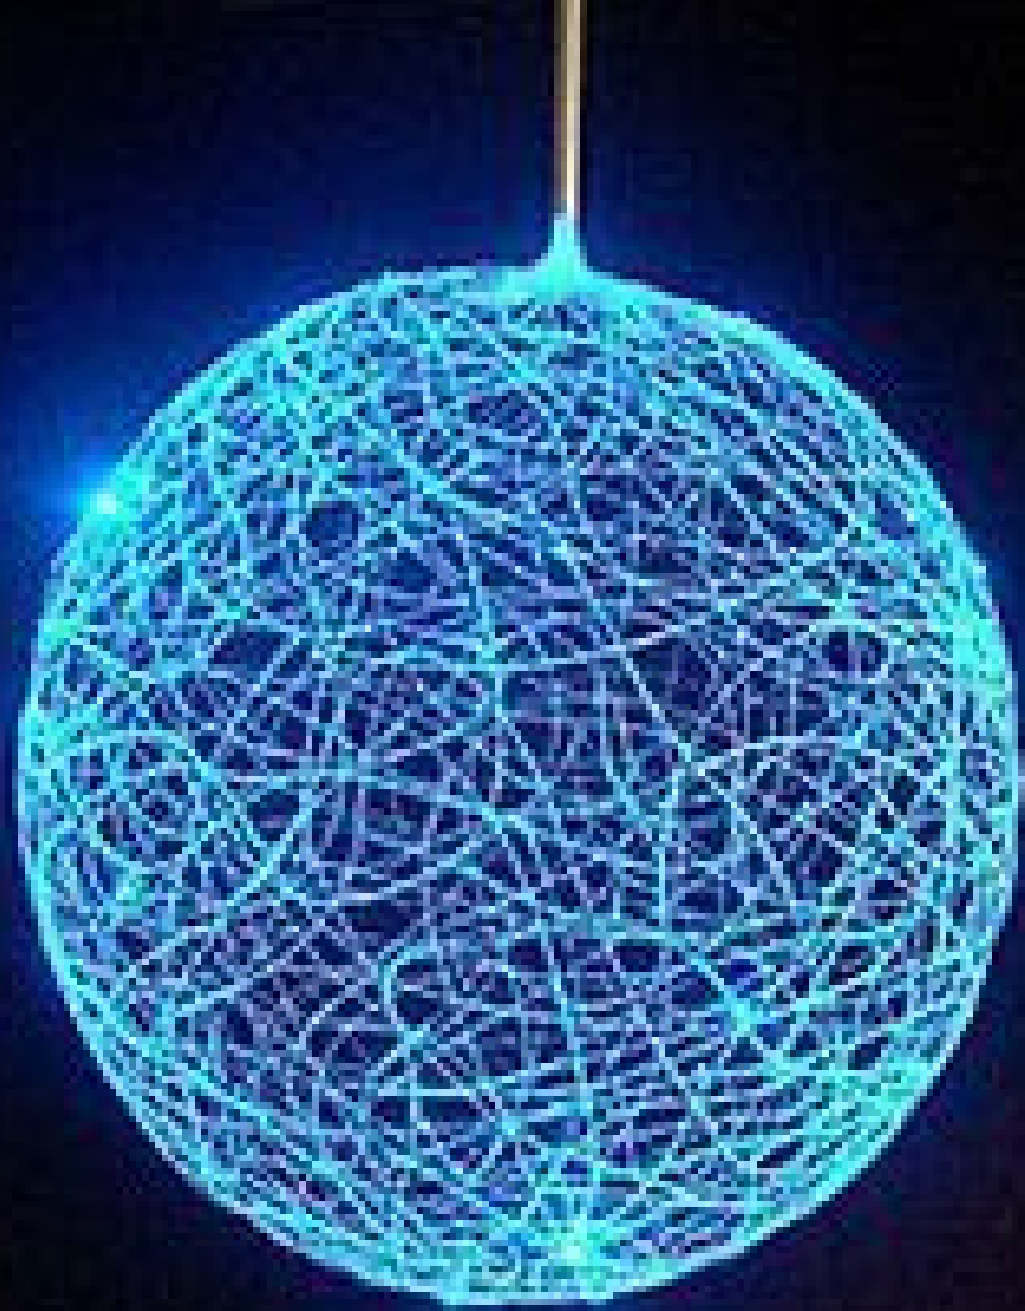

Multiple parallel shooting stars and geometric panels can evoke a sense of viewing space through the window of a rocketship

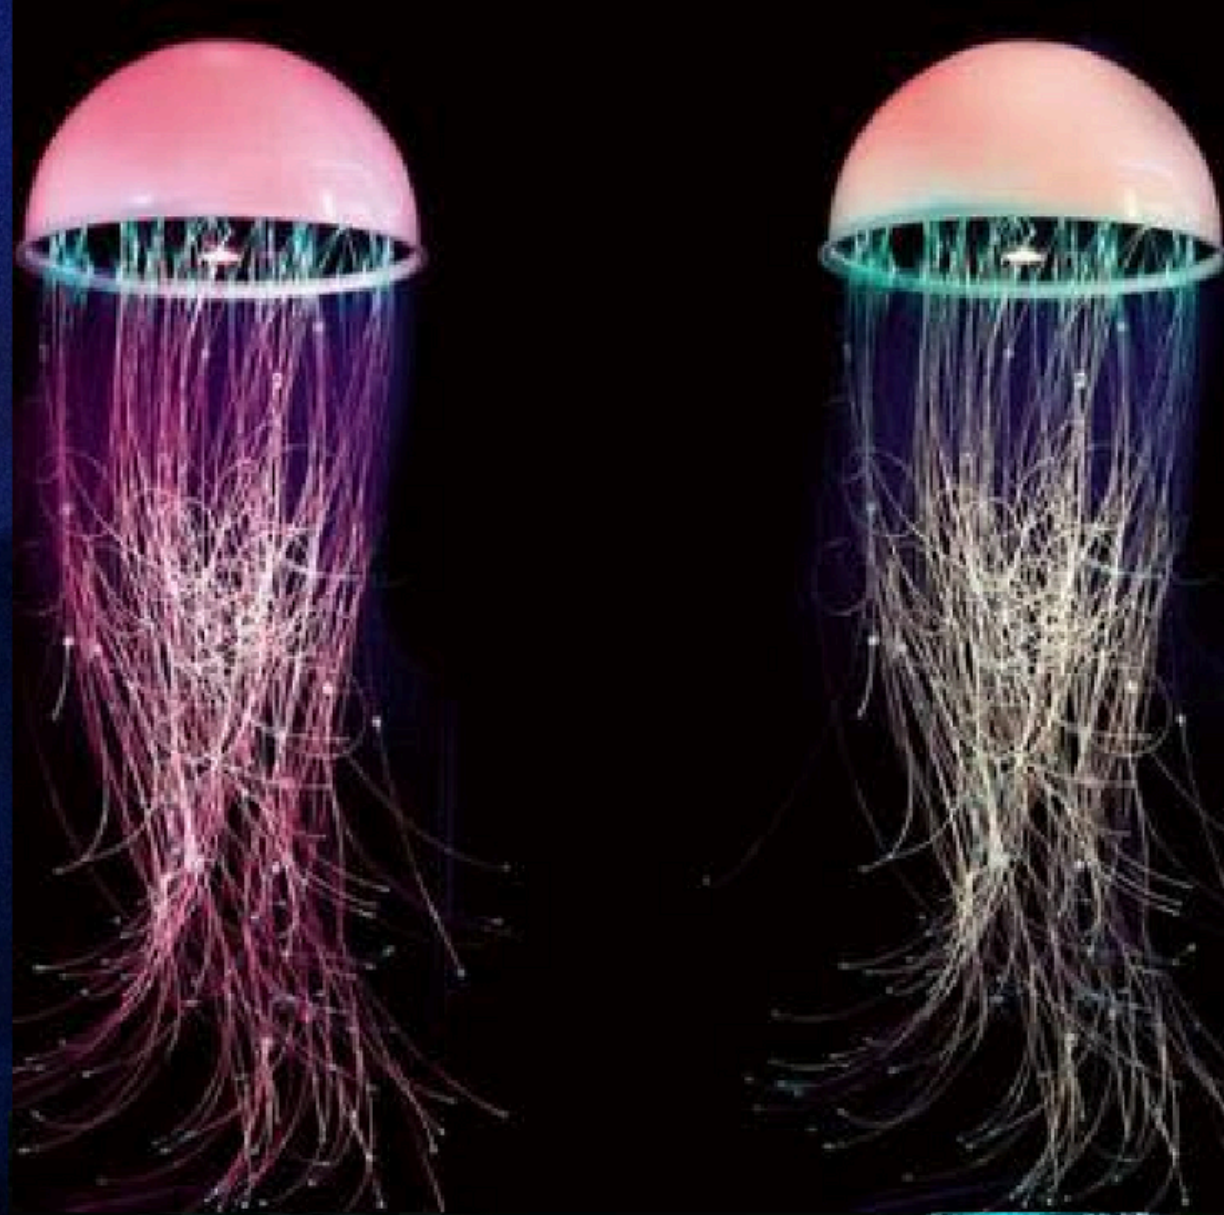

Fiber Optic Chandeliers

High-Power LED illuminators are necessary to create the most impressive displays

All chandeliers can be customized to desired length, density and patterns
